Dear Hiring Team,

I am a Senior Backend Engineer with 7+ years of experience building and scaling fintech and payment infrastructure, with strong expertise in backend architecture, distributed transaction processing, PCI DSS compliance, and reliability-focused platform engineering.

At Portonics Limited, I have been leading backend modernization and reliability initiatives for PortPos payment infrastructure, handling approximately 300M BDT in monthly transaction volume across 20+ payment gateways serving more than 10M users and 500+ merchants.

One of my most impactful contributions was leading the migration of a legacy monolithic payment platform into modular, independently deployable systems using Clean Architecture and Hexagonal Architecture principles. This modernization significantly improved scalability, deployment reliability, maintainability, and operational efficiency.

I have hands-on experience across architecture design, backend engineering, database optimization, deployment workflows, observability, and payment reliability engineering. I also led PCI DSS audit coordination with international QSAs, including compliance documentation, pentest remediation, evidence handling, and security discussions.

Some of the engineering outcomes I contributed to include:

- Reducing transaction mismatch rates from 10% to 0.5%
- Reducing payment failure and mismatch scenarios by 90%
- Improving platform latency by 60%
- Maintaining 99.99% uptime for business-critical payment systems

Beyond technical implementation, I regularly collaborate with DevOps teams, project managers, and engineering teams on architecture decisions, release coordination, sprint planning, and technical mentoring.

I am currently looking for remote opportunities where I can contribute to high-scale backend systems, fintech infrastructure, distributed systems, and reliability-focused engineering challenges.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience and engineering background can contribute to your team.

Sincerely,

Fahim Shahriyear Hossain
